Stunning Views In Any Space

LiquidView transforms indoor spaces into wellness-focused environments with spectacular, immersive views. Bring the beauty of the outdoors into any indoor setting to elevate design and aesthetic, as well as promote relaxation and mental health.

LiquidView Digital Windows combine the high resolution and detail of 8K with the improved color range and contrast of HDR for views so realistic, it feels like the beaches of Hawaii or the chateaus of Nice are just outside. In fact, Stanford University is currently conducting a study of the health benefits of LiquidView Digital Windows, exploring how they can “trick the brain” into feeling like the viewer is looking out onto a breathtaking view.

Venice, Italy

Central Park, NYC

Oahu, HI

The Best Technology For The Best Views

Our film crews travel the world to capture some of the most beautiful views imaginable, using the same ultra high definition camera system James Cameron used in *Avatar*. The 24-hour views are shot with 8.6K cameras, then color corrected and sound mixed by awarded industry professionals. The patent pending LiquidView system matches day and night cycles to the installation location, ensuring accurate sunrises and sunsets every day.

Your Passport Is In Your Palm

Ready for a change of scenery? Use your phone to choose a different location from a growing library of views, then simply swipe. The LiquidView app is compatible with Android and iOS.
